It is time to take action!

Methane Matters Now. Methane is a prevalent manmade greenhouse gas that traps 28 times more heat than carbon dioxide (CO₂). Reducing methane emissions by recovering and using methane as a clean energy source offers many benefits for the environment and local communities.

- Decreased greenhouse gases
- Better air and water quality
- Improved human health
- Enhanced energy security
- Increased worker safety
- Expanded economic growth

We want to showcase your actions. The Global Methane Challenge is open to all public and private-sector actors interested in reducing methane emissions. We will promote your efforts throughout 2019 and showcase the achievements of all Challenge participants at a capstone event in 2020.

Take the Challenge!

Whether you are ready to make a new commitment or want to highlight ongoing efforts, get started by using the simple form at globalmethane.org/challenge.

Showcase Your Efforts to Reduce Methane

Here are some ideas for participating in the Global Methane Challenge.

- Monitor methane emissions and create an emissions inventory.
- Develop an action plan for reducing emissions in one or more sectors.
- Provide technical or financial support to a methane mitigation project.
- Educate the public about methane emissions and abatement opportunities.
- Showcase a methane mitigation project or technology.

The Global Methane Challenge is sponsored by the Global Methane Initiative (GMI), an international public-private partnership composed of 45 Partner countries and a Project Network that reaches more than 700 members, including private companies, financial institutions, universities, and other governmental and non-governmental organizations.
